

\$TOPATO – Toilet Paper Token

Whitepaper v1.0

1. Introduction

\$TOPATO (Toilet Paper Token) is a unique memecoin inspired by one of humanity's most universal habits: stockpiling toilet paper in times of crisis. When panic hits, people rush to buy toilet paper first. \$TOPATO captures this reflex, bringing it to the crypto market with a humorous and innovative twist.

2. Mission & Vision

Our mission is to create a memorable, community-driven meme token that leverages humor, recognizability, and transparent tokenomics.

In times of crisis, people instinctively buy toilet paper. \$TOPATO turns this collective behavior into a digital crypto experience.

With hype, exclusivity, and clear mechanics, we aim to become the most talked-about meme token of the year.

3. Tokenomics

Total Supply: 9,000,000,000,000 TOPATO

Whale Cage: In the initial phase, 85% of the tokens are 'locked'. Only 15% is in free circulation.

Max Buy: Until 15% of the total supply is in circulation, no single transaction can purchase more than 1,000,000,000 TOPATO.

Cooldown: Each buy transaction has a 30-second cooldown per address (anti-bot, anti-whale).

Airdrop: After 15% of supply is circulating, an airdrop and new marketing phase begins.

Sell Tax: 3% DEX sell tax, split as follows: 2% burned, 0.5% to the dev wallet, 0.5% to the owner wallet.

Burn Mechanism:

Once TOPATO exits the 'whale cage' (15% supply in circulation), 5% of the unsold tokens can be burned.

This burn can only be triggered if Bitcoin, Ethereum, and Solana have all been down at least -5% for one week (relative to one week prior).

Once all three coins have been at least +1% up for one day, the burn mechanism resets.

The TOPATO community (anyone holding tokens in their wallet) can propose and vote for a burn event.

In the early phase, burning will be performed manually by the contract owner; the goal is to automate this process in the future.

Liquidity Pool Claim: Upon launch, the owner can claim 562,500,000 tokens from the contract for initial liquidity, marketing, and development. This claim is logged on-chain and fully transparent.

4. Unique Features

Whale Cage Launch: Early phase with strict limits to maximize hype and FOMO.

Automatic Cooldown: Each buyer must wait 30 seconds before another purchase, to prevent bots and megawhales.

Transparent and Secure: No owner mint, no hidden supply—everything is set at launch.

Airdrops & Community Rewards: Targeted at active and loyal TOPATO fans.

Branding: Toilet paper is a global symbol of scarcity, safety, and now: blockchain fun.

5. Roadmap

Phase 1: Launch with whale cage & cooldown. Community growth, hype, memes, and social media.

Phase 2: After 15% of supply circulates, whale cage ends, followed by a major airdrop and marketing push.

The burn mechanism can be triggered after sustained bear markets for BTC, ETH, and SOL.

Phase 3: Focused marketing in Arabic and Asian markets.

Phase 4: Further development based on community feedback: extra burns, games, NFTs, partnerships, and more.

6. Security & Transparency

Fully verified on BaseScan.

Open source code on Github.

No rugpull risk; all tokens are minted at deployment.

Transparent burn and airdrop policies.

Community voting on future burn events.
